# In this Video.....

**Version Control System**

**Imp of GIT**

**GIT Usecases**

**What is GIT?**

**Why GIT?**

**What is GitHub?**

**Difference Between GIT & GitHub**

**GIT Setup**

**GIT + VS Code**

**GIT Workflow**

**GIT add**

**GIT Commit**

**GIT Push & Pull**

**GIT Branches**

**GIT Merge**

**GIT Merge Conflicts**

**GIT Commands**

# **What is Version Control?**

**Version control is a system that tracks changes to files over time, allowing developers to revert to previous versions, collaborate efficiently, and manage different code versions.**

**It prevents data loss and ensures smooth teamwork in software development.**

Repo: Repo is a folder where git is initialized

# What is Git?

**Git is a distributed version control system that tracks changes in code, allowing multiple developers to collaborate efficiently.**

# Use Cases of Git

**Software Development**

**Project Management**

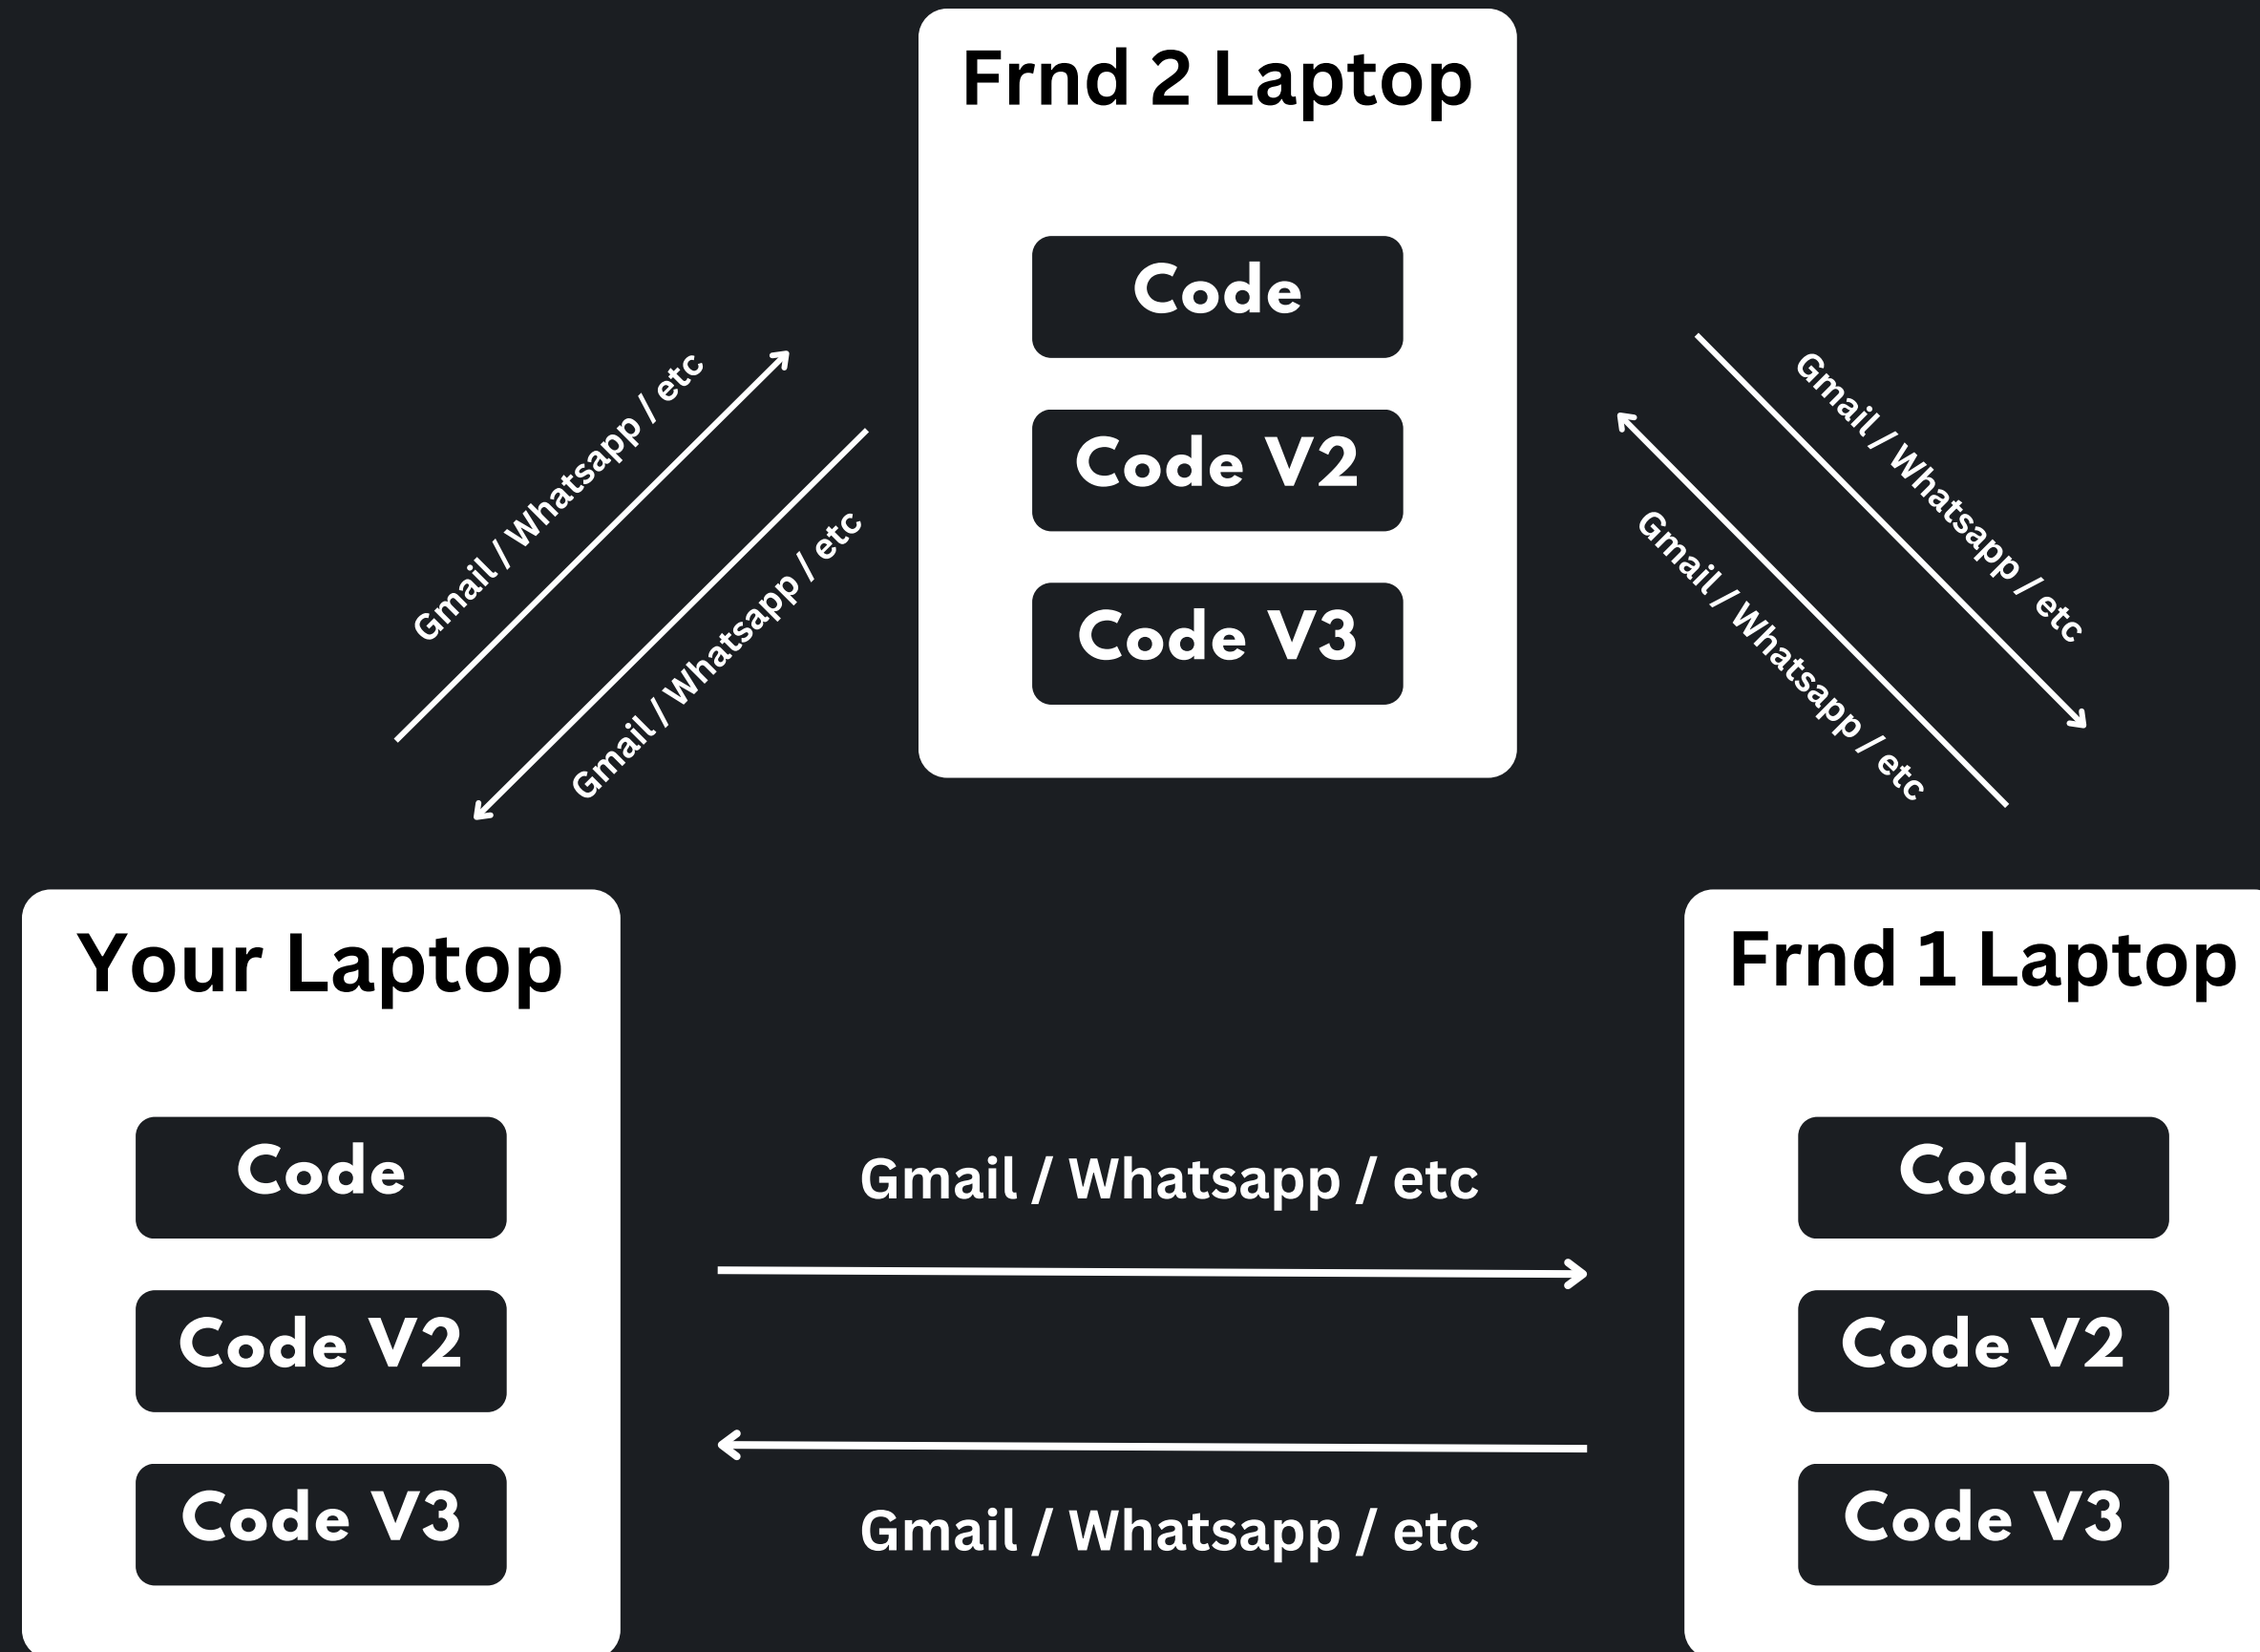

**Tracking Versions**

# With out GitHub

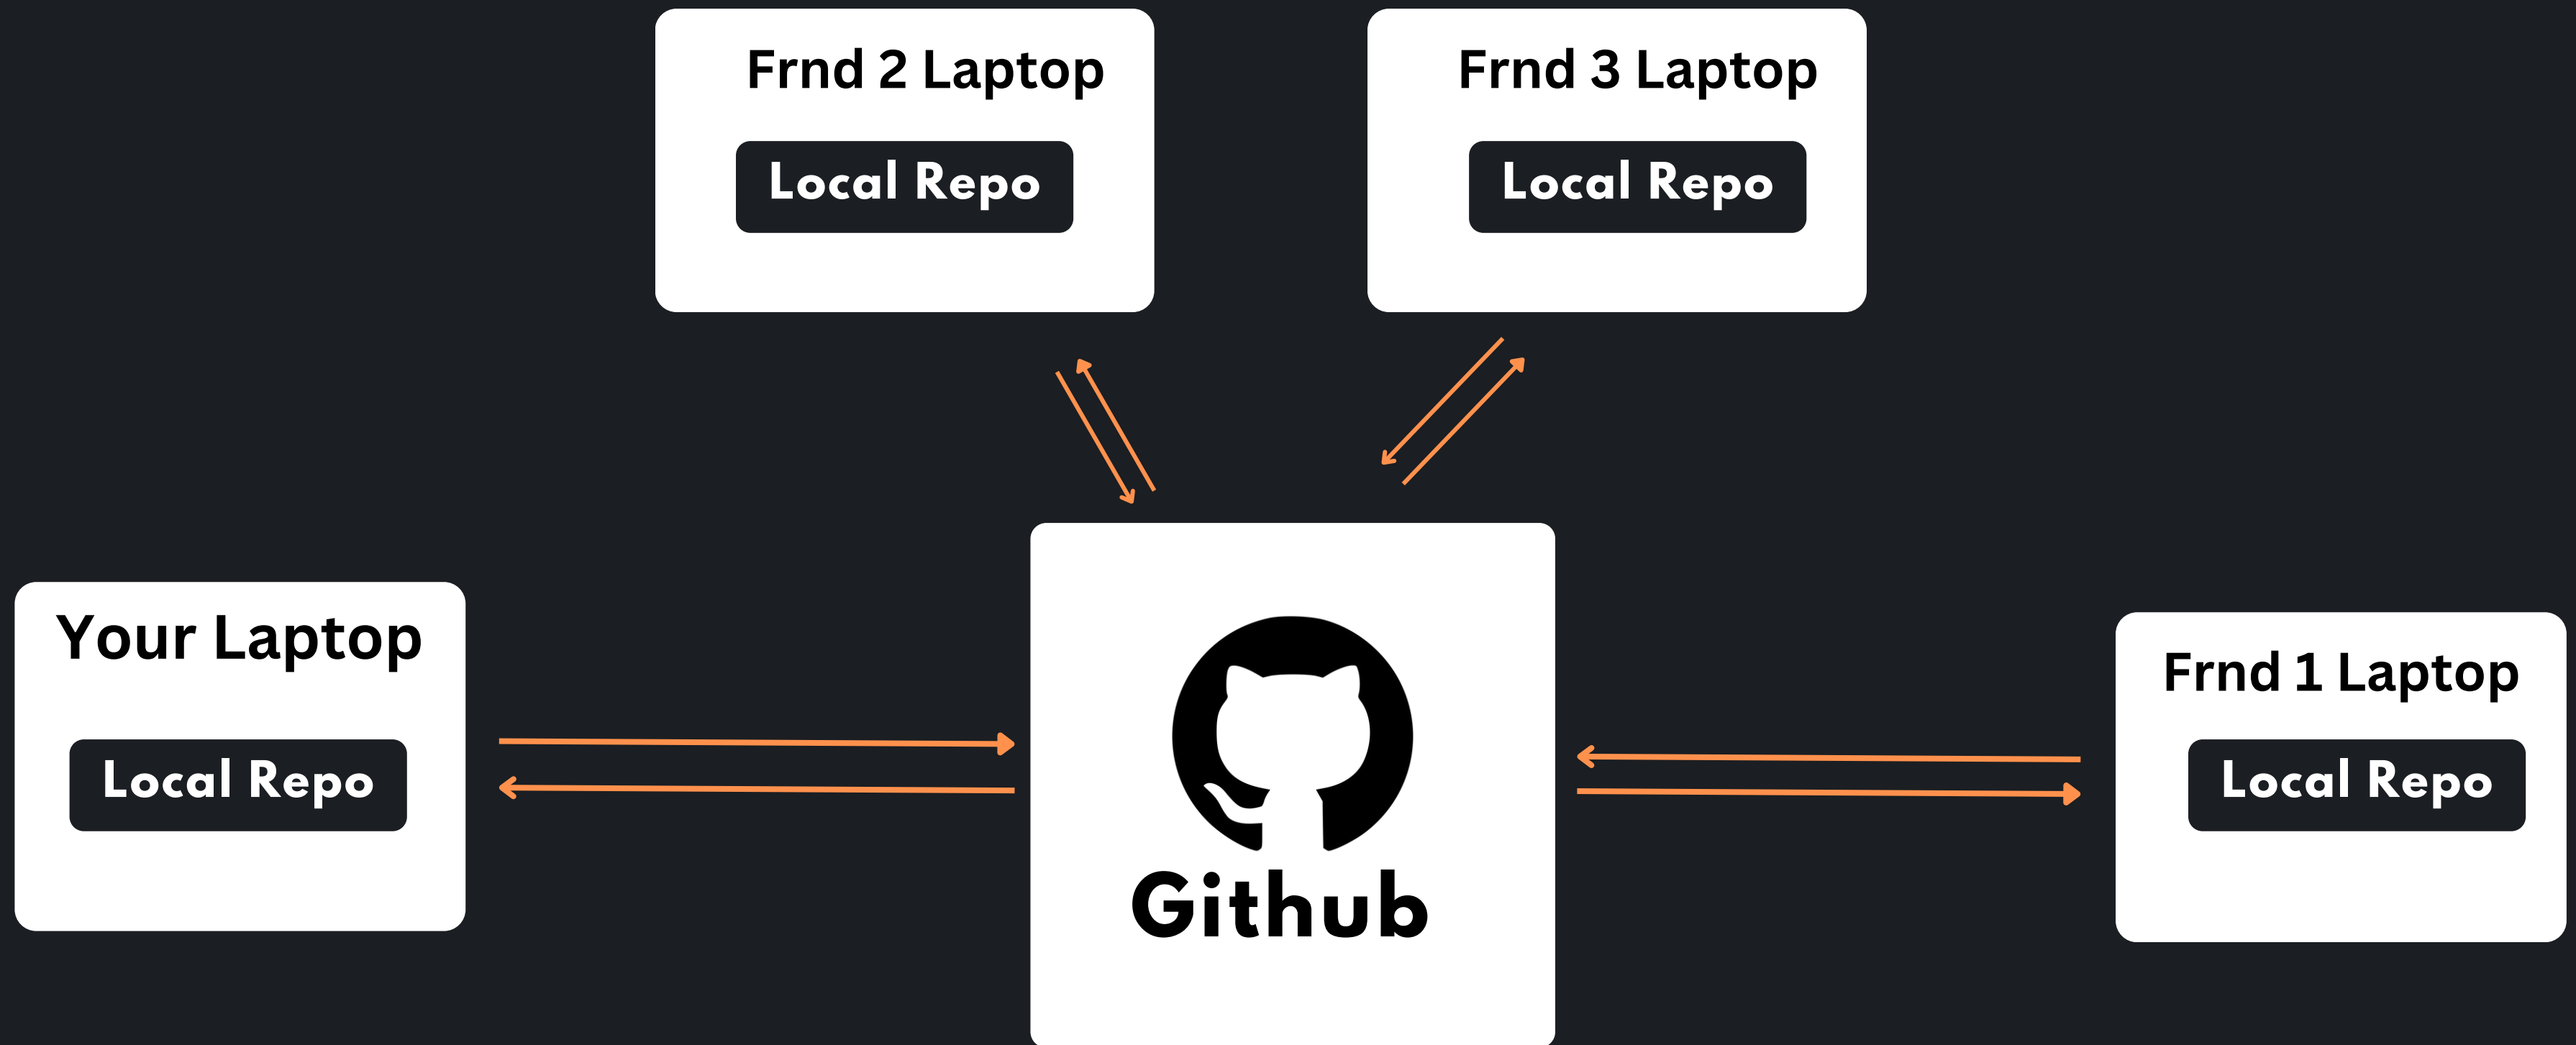

# With out GitHub

# With GitHub

# What is GitHub?

**GitHub is a cloud-based platform that hosts Git repositories, enabling developers to collaborate, manage code, and track changes efficiently.**

# Diff between **Git** & **GitHub**

## **Git:**

**Git works locally to track the changes in folders and Files. helps in organizing the code with the help of Branches.**

## **GitHub:**

**A cloud platform that hosts the local repo online. so that anyone with the repo link can access the project and contribute changes**

# **Git Setup**

## **In Local System**

# GitHub Setup

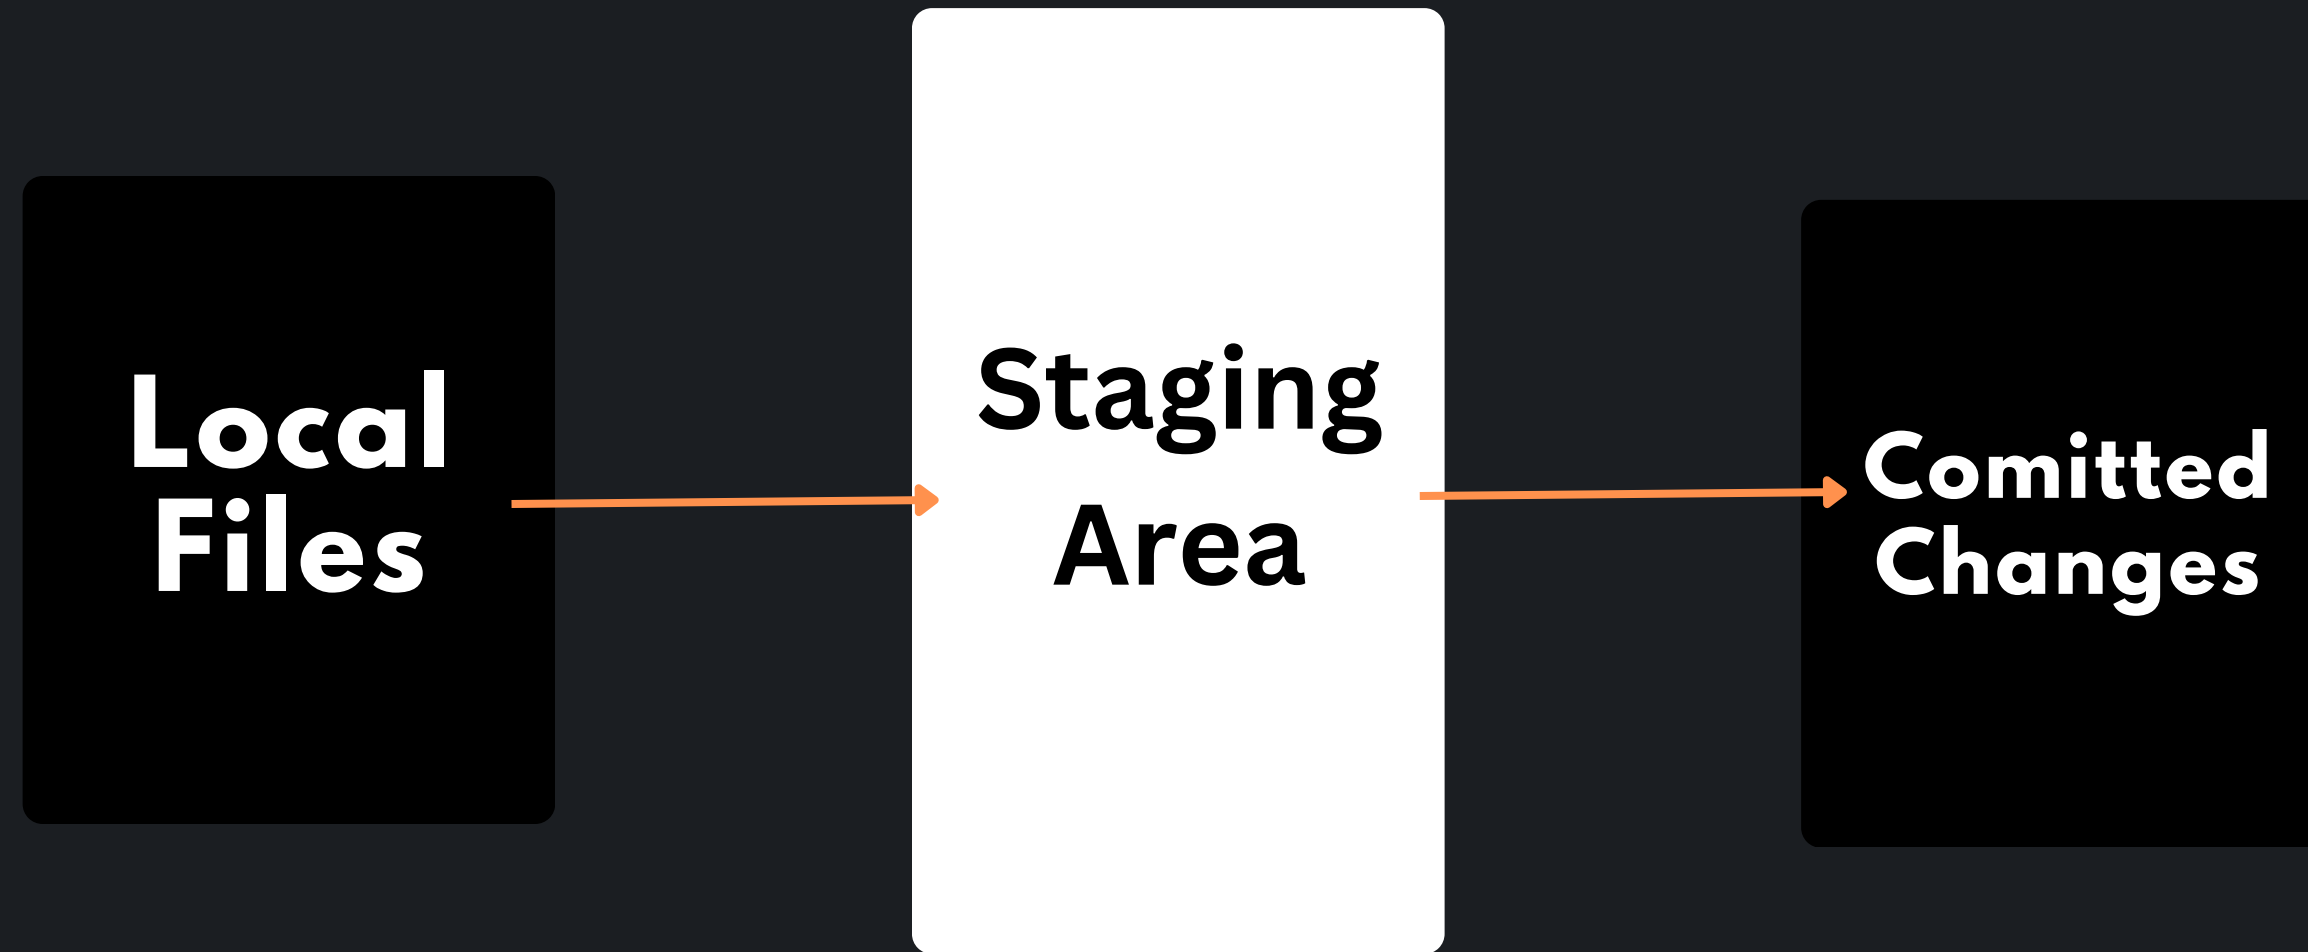

# Git Configuration

# **GIT**

## **Demo**

# Git Workflow

# Git Workflow

## 1. `git add --all / git add .`

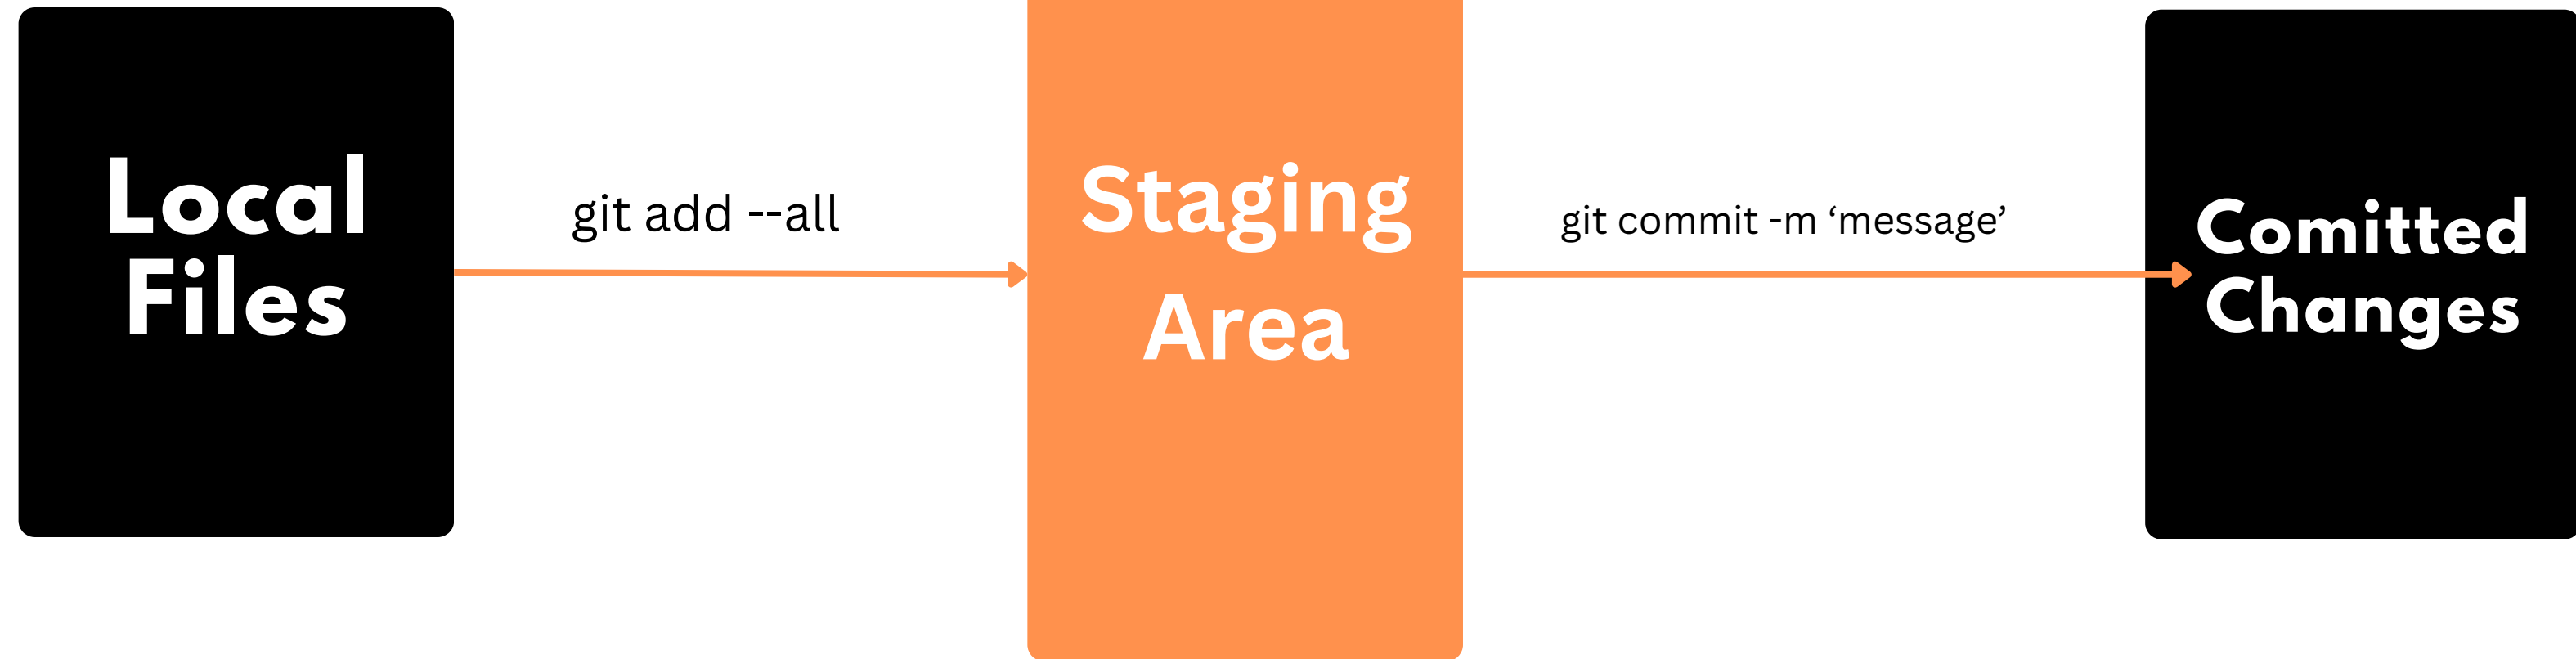

This command will add the files to the staging area

## 2. `git commit -m 'message'`

This command will Commit the Changes locally.

# Git Workflow

## Local Repo

# Git Workflow

## 1. `git add --all / git add .`

This command will add the files to the staging area

## 2. `git commit -m 'message'`

This command will Commit the Changes locally.

## 3. `git push remoteName BranchName`

This command will push the changes from local repo to GitHub

# Git Workflow

## Local Repo

**Local  
Files**

git add  
--all

**Staging  
Area**

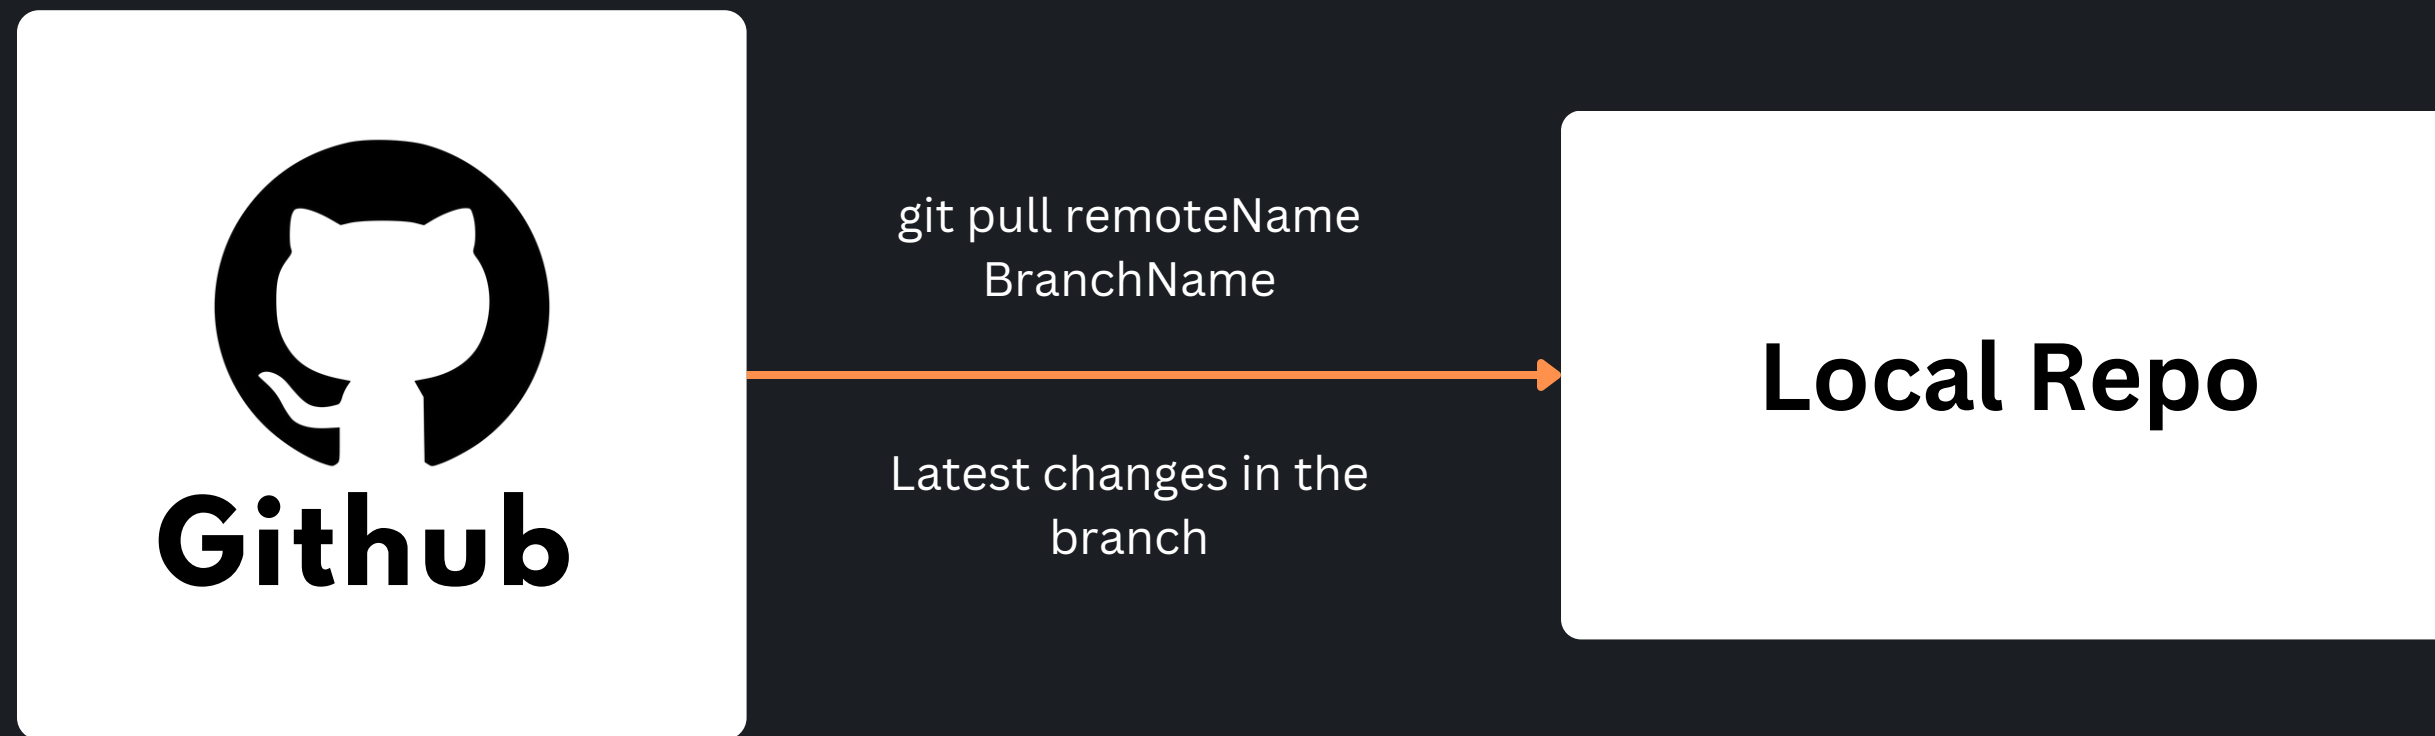

git commit -  
m 'message'

**Comitted  
Changes**

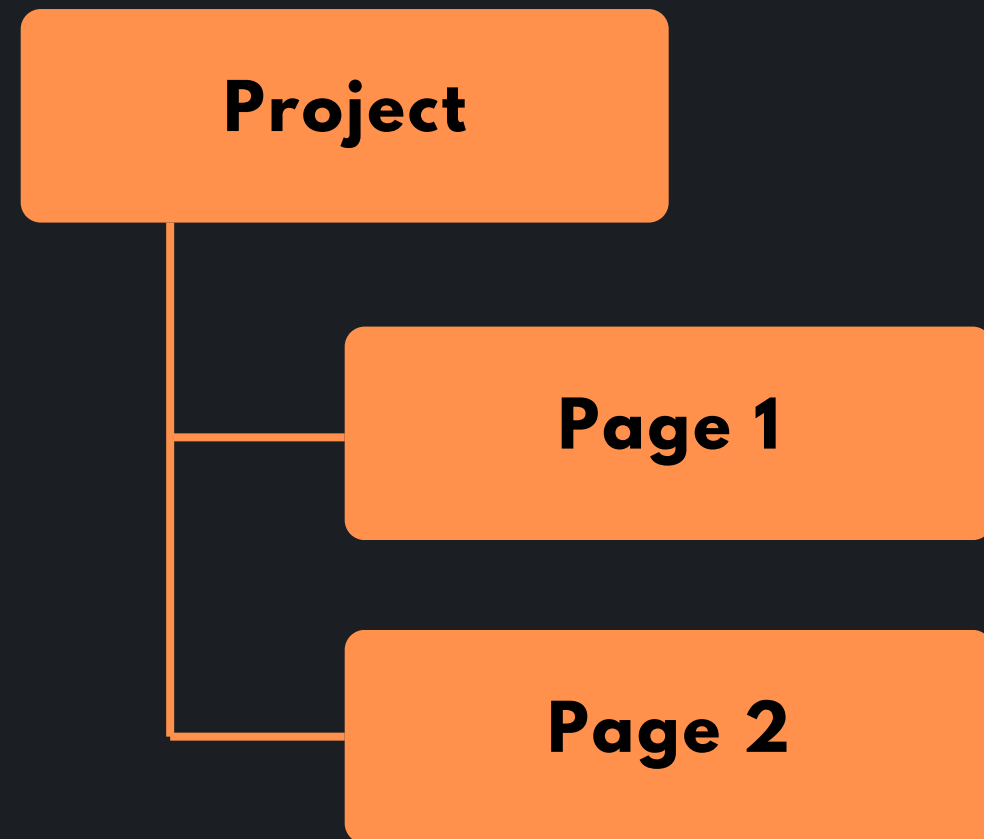

git push remoteName  
BranchName

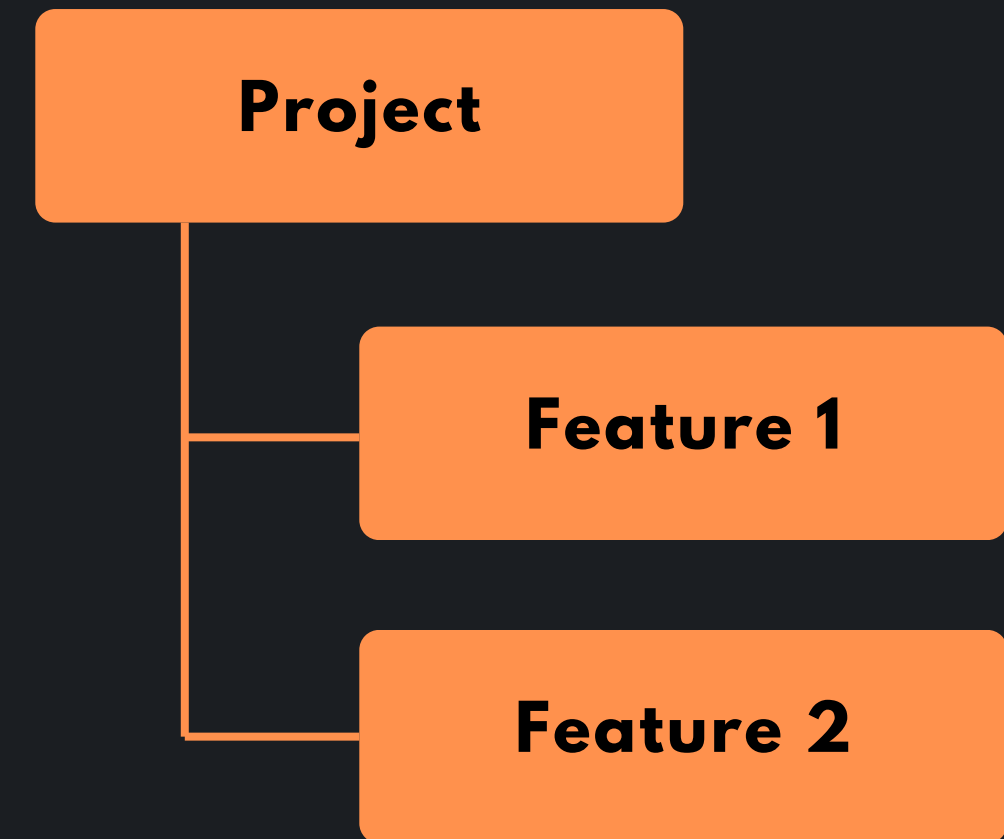

# Git Workflow

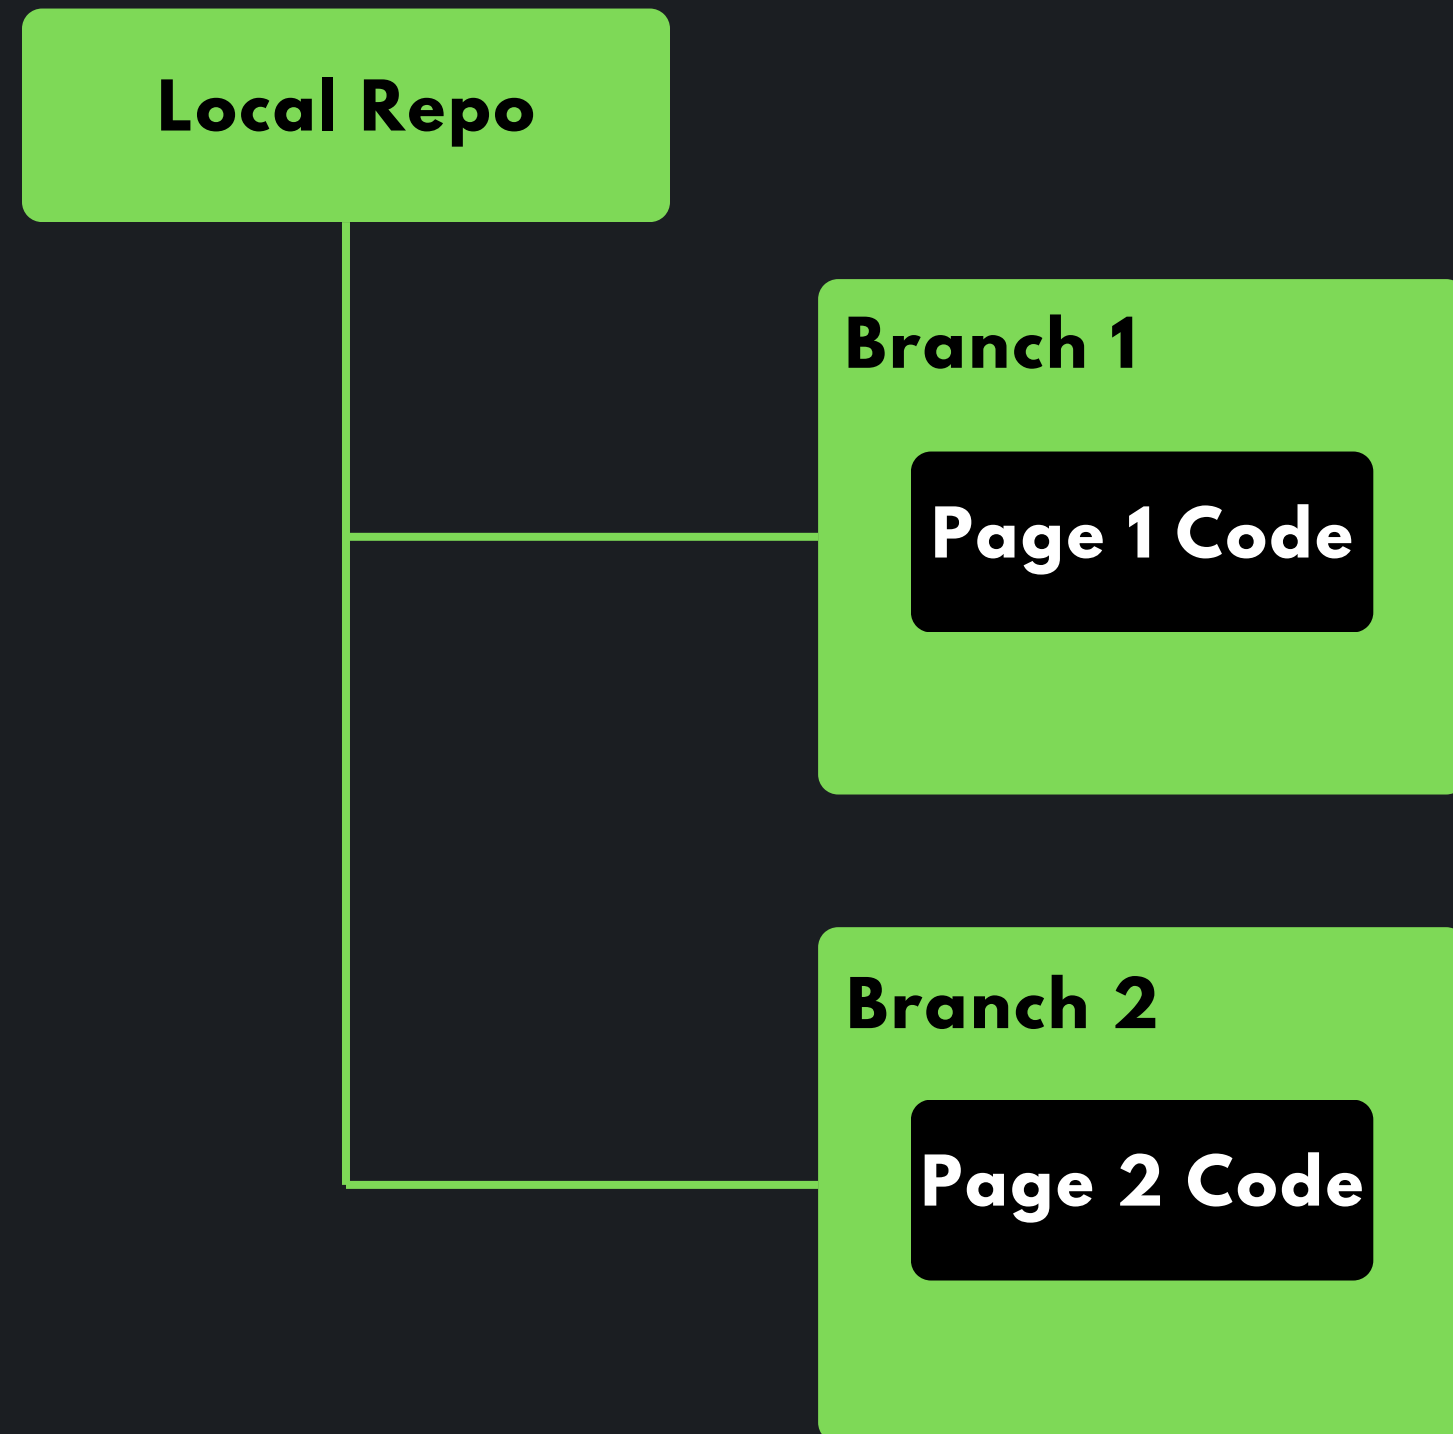

# Git Branches

OR

# Git Branches

# Git Branch Commands

1. **git branch** – Lists all local branches in the repository.
2. **git branch <branch-name>** – Creates a new branch with the specified name.
3. **git checkout <branch-name> / git switch <branch-name>** – Switches to the specified branch.
4. **git checkout -b <branch-name> / git switch -c <branch-name>** – Creates and switches to a new branch.
5. **git merge <branch-name>** – Merges the specified branch into the current branch.
6. **git branch -d <branch-name>** – Deletes a local branch (only if fully merged).
7. **git branch -D <branch-name>** – Force deletes a local branch.
8. **git push origin --delete <branch-name>** – Deletes a remote branch.
9. **git branch -m <old-name> <new-name>** – Renames a branch.
10. **git branch -r** – Lists remote branches
